

With the development of ZYTO biocommunication, it is easy to identify your body's biological preference for things relating to your health.

Your first step to getting more out of life may be as close as a ZYTO biocommunication scan.

### 1 – Insight into your health.

Reports from your ZYTO scan provide you with information that may help identify your individual needs such as nutritional support, appropriate medication, or clinical assistance. Identifying items to which you have an unusual response gives you and your healthcare provider insight about health-related issues that may be keeping you from functioning at a balanced state.

### 2 – Identify your biological preference for nutrition.

Does one size fit all when it comes to nutritional support? Of course not! ZYTO scans identify your body's unique positive responses; we call these your biological preferences. Knowing your biological preferences helps you and your healthcare provider choose the nutritional supplements that will support your individual health needs.

### 3 – Save Money.

There are a lot of good nutritional supplements but you probably don't need them all. Knowing your biological preferences helps you choose products that are right for you. Choosing well means your investment in supplements is more likely to pay off, providing you the benefits you need and saving money on things you don't need.

### 4 – Increase Energy.

Your body consumes energy in its effort to maintain a healthy balance. When your body uses this energy to deal with life's extra challenges, like fighting a cold, you will have less energy to perform your day-to-day physical activities. ZYTO helps you identify the additional support your body may need to maintain balance and keep your energy levels high. By providing your body extra help when it's needed, you're more likely to address issues while they are small, leaving you with more energy to enjoy life.

### 5 – Track your Health.

ZYTO biocommunication scans give you information 'in the moment.' Tracking your scans over time can be beneficial, allowing you to identify trends or long term issues that you will want to pay particular attention to. Keeping track of your past can help you predict the future, and reviewing your past ZYTO reports gives you essentially a look back through time.

### 6 – Verbal Communication has limitations.

Have you ever asked a sick toddler or a child with autism how they are feeling? Even for adults, using words to explain how you feel can be a challenge. Biocommunication opens up an entirely new communication channel with your body. By supplementing verbal communication with ZYTO biocommunication, a second perspective is established that can provide helpful insights and information about your health.
